

Installation notes for "Power Cables"

We address the currently installed Acrobat Reader via the OCX interface when the PDF files in the "Power Cables" CD-ROM are displayed. Unfortunately, Adobe no longer includes the "PDF.OCX" file as from Version 7 of the Reader.

Acrobat Reader 6 must be installed so that the CD can be used.

It goes without saying that you can also install and use two versions of the Reader. To do this, first install Version 7 and then a previous version (Version 6 or the Version 5 on the CD). Display of the PDF files from the "Power Cables" CD-ROM should then function again.

If you would like to display other PDF files with Version 7 independently of the "Power Cables" CD-ROM, you must start Reader 7 by clicking on the Start button and by then loading the relevant PDF file. If two different Acrobat versions are installed, double-clicking on a PDF file always leads to starting of the Acrobat version installed last (i.e. in the case described above, Acrobat Reader 6 or 5 is started).

We address the currently installed Acrobat Reader via the OCX interface when the PDF files in the "Power Cables" CD-ROM are displayed. Unfortunately, Adobe no longer includes the "PDF.OCX" file as from Version 7 of the Reader, i.e. the Reader can no longer be triggered by external programs. Of course, we are not the only ones who have to grapple with this problem.
